HRV_BR2_v1.0

Description of quantified economy-wide emission reduction target: base year^a

<i>Party</i>	<i>Croatia</i>	
Base year /base period	1990	
Emission reduction target	% of base year/base period	% of 1990 ^b
	20.00	20.00
Period for reaching target	BY-2020	

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b Optional.

Description of quantified economy-wide emission reduction target: gases and sectors covered^a

<i>Gases covered</i>	<i>Base year for each gas (year):</i>	
CO ₂	1990	
CH ₄	1990	
N ₂ O	1990	
HFCs	1990	
PFCs	1990	
SF ₆	1990	
NF ₃		
Other Gases (specify)		
Sectors covered ^b	Energy	Yes
	Transport ^f	Yes
	Industrial processes ^g	Yes
	Agriculture	Yes
	LULUCF	No
	Waste	Yes
	Other Sectors (specify)	

Abbreviations : LULUCF = land use, land-use change and forestry.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b More than one selection will be allowed. If Parties use sectors other than those indicated above, the explanation of how these sectors relate to the sectors defined by the IPCC should be provided.

^f Transport is reported as a subsector of the energy sector.

^g Industrial processes refer to the industrial processes and solvent and other product use sectors.

Description of quantified economy-wide emission reduction target: global warming potential values (GWP)^a

<i>Gases</i>	<i>GWP values^b</i>
CO ₂	4th AR
CH ₄	4th AR
N ₂ O	4th AR
HFCs	4th AR
PFCs	4th AR
SF ₆	4th AR
NF ₃	4th AR
Other Gases (specify)	

Abbreviations : GWP = global warming potential

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b Please specify the reference for the GWP: Second Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) or the Fourth Assessment Report of the IPCC.

Description of quantified economy-wide emission reduction target: approach to counting emissions and removals from the LULUCF sector^a

Role of LULUCF	LULUCF in base year level and target	Excluded
	Contribution of LULUCF is calculated using	

Abbreviation : LULUCF = land use, land-use change and forestry.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

Description of quantified economy-wide emission reduction target: market-based mechanisms under the Convention^a

<i>Market-based mechanisms under the Convention</i>	<i>Possible scale of contributions (estimated kt CO₂ eq)</i>
CERs	
ERUs	
AAUs ⁱ	
Carry-over units ^j	
Other mechanism units under the Convention (specify) ^d	

Abbreviations : AAU = assigned amount unit, CER = certified emission reduction, ERU = emission reduction unit.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^d As indicated in paragraph 5(e) of the guidelines contained in annex I of decision 2/CP.17 .

ⁱ AAUs issued to or purchased by a Party.

^j Units carried over from the first to the second commitment periods of the Kyoto Protocol, as described in decision 13/CMP.1 and consistent with decision 1/CMP.8.

Description of quantified economy-wide emission reduction target: other market-based mechanisms^a

<i>Other market-based mechanisms</i>	<i>Possible scale of contributions</i>
<i>(Specify)</i>	<i>(estimated kt CO₂ eq)</i>

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

Description of quantified economy-wide emission reduction target: any other information^{a,b}

In December 2009, the European Council reiterated the conditional offer of the EU to move to a 30% reduction by 2020 compared to 1990 levels as part of a global and comprehensive agreement for the period beyond 2012, provided that other developed countries commit themselves to comparable emission reductions and that developing countries contribute adequately according to their responsibilities and respective capabilities.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b This information could include information on the domestic legal status of the target or the total assigned amount of emission units for the period for reaching a target. Some of this information is presented in the narrative part of the biennial report.

Custom Footnotes

(Decision No406/2009/EC). These legally binding trajectories not only result in a 20% GHG reduction in 2020 compared to 1990 but also define the EU's annual target pathway to reduce EU GHG emissions from 2013 to 2020. The Effort Sharing Decision sets annual national emission targets for all Member States for the period 2013-2020 for those sectors not covered by the EU emissions trading system (ETS), expressed as percentage changes from 2005 levels. In March 2013, the Commission formally adopted the national annual limits throughout the period for each Member State. By 2020, the national targets will collectively deliver a reduction of around 10% in total EU emissions from the sectors covered compared with 2005 levels. The emission reduction to be achieved

Table 3

HRV_BR2_v1.0

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MSP-3: Preparation of National Feasibility Study with the action plan for the preparatory activities for CCS projects in Croatia	Energy, Industry/industrial processes	CO ₂	Carbon capture and storage	Other (Information)	Planned	Technology for carbon capture and storage for large emission sources is not yet commercially available. The possibility of commercial application is expected in the period after the 2020. According to Directive 2009/31/EC on the geological storage of carbon dioxide, respectively Article 36 of Directive on industrial emissions 2010/75/EU, for power plants with capacity exceeding 300 MW which have obtained the construction permit after the entry into force of the Directive 2009/31/EK it is necessary to assess whether the following requirements are satisfied: - suitable storage locations are available, - transport facilities are technically and economically feasible and - upgrade of the plant for CO ₂ capture is technically and economically feasible. If these conditions are satisfied, the competent authority should provide adequate reserve area on the plant's location for equipment for capturing and compressing extracted CO ₂ . Due to described commitments for new thermal power plants, with this measure preparation of National Feasibility Study with the action plan of the preparatory activities for CCS projects, is planned. This Study will include stages of capturing on the sources of emissions, transport, injection and storage.	2017	Ministry of Economy		0

Table 3

HRV_BR2_v1.0

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MEN-3 Measurement and informative calculation of energy consumption*	Energy	CO ₂	Demand management/reduction	Information	Implemented	Law on Energy Efficiency (OG 127/14) stipulates that energy distributors ensure that, to the extent that is technically possible, financially reasonable and proportionate in view of the potential energy savings, final customers of energy and hot water in homes acquire individual meters at competitive prices that accurately reflect the actual energy consumption of end customers. Energy supplier shall free of charge on request of the end customer at least once a year provide information on the calculation of electricity, heat or gas and previous consumption of the end customer. Legible and understandable energy bills (electricity, heat and natural gas) and individual consumption metering are obligation of distribution system operators and suppliers. This will increase consumer awareness of the way in which they consume the energy. The bills should include comparisons of consumption for the current year and for the corresponding period of the previous year, as well as information on available energy efficiency measures.	2010	Ministry of Economy Distributing companies		IE
MEN-4, MEN-8 Promotion of the cogeneration construction*	Energy	CO ₂	Efficiency improvement in the energy and transformation sector Increase in renewable energy	Other (Regulatory)	Implemented	The legislative framework which introduces a system of incentives for electricity generation from cogeneration was adopted for implementation of this measure. The largest contribution is expected from new industrial cogeneration. Incentives (tariffs) are the main mechanism for the promotion of cogeneration. Tariffs depend on the installed plant capacity. In addition to the system of incentives for electricity generation from cogeneration plants, this measure provides adoption of appropriate regulations to promote the heat generation from cogeneration (defining the status of eligible heat producer).	2007	Ministry of Economy		NE

Table 3

HRV_BR2_v1.0

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MEN-7 Supporting the use of renewable energy sources in electricity generation*	Energy	CO ₂	Increase in renewable energy	Other (Regulatory)	Implemented	For the implementation of measures, legislative framework, which introduces a system of incentives electricity generation using renewable energy sources, has been adopted. The main mechanism for development of renewable energy sources are incentive prices (tariffs). The tariffs depend on the type of source, power plant size and amount of generated electricity. In the National Action Plan for Renewable Energy Sources (Ministry of Economy, 2013), the Republic of Croatia determined the objectives and policy for increasing the share of RES in final energy consumption by 2020. The Act on Renewable Energy Sources (OG 100/15) was adopted in 2015. The act, among other things, reforms the incentive system from feed-in tariffs to the premium model. The law should come into force at the beginning of 2016.	2007	Ministry of Economy		IE
MEN-9 Usage of biodegradable fraction of municipal waste in public electricity and heating plants*	Energy, Waste management/waste	CH ₄ , CO ₂	Switch to less carbon-intensive fuels Increase in renewable energy Enhanced CH ₄ collection and use Waste incineration with energy use	Other (Regulatory)	Implemented	This is a cross-cutting measure meaning that it requires coordination of activities with "Waste management" sector. This measure is related to the measures MSP-15: Use of biogas for electricity and heat generation and MSP-16: Thermal treatment of municipal waste and sludge from wastewater treatment plants. The reduction of biodegradable waste in disposed municipal solid waste is one of the main objectives defined in the Waste Management Plan of the Republic of Croatia for the period from 2007 until 2015 (OG 85/2007, 126/2010, 31/2011) and the Law of Sustainable Waste Management (OG 94/2013). Using of biodegradable waste for production of biogas that could be used as a fuel as well as municipal waste and sludge from wastewater treatment in thermal treatment plant also means reducing the consumption of fossil fuels in the energy sector. One of the activities leading to the accomplishment of this objective is the utilization of waste as alternative fuel in public electricity and heating plants.	2012	Ministry of Environmental and Nature Protection		IE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MEN-12 Promotion of the use of renewable energy sources and energy efficiency by HBOR-a (Croatian Bank for Reconstruction and Development)*	Energy	CO ₂	Increase in renewable energy Efficiency improvement in the energy and transformation sector Efficiency improvement in industrial end-use sectors Efficiency improvements of buildings Efficiency improvement in services/ tertiary sector	Economic	Implemented	For the purpose of financing the environmental protection projects, HBOR extends loans through the Loan programme for the Preparation of Renewable Energy Resources and Loan Programme for the Financing of Projects of Environmental protection, Energy Efficiency and Renewable Energy Sources. The goal of the loan program of environmental projects, energy efficiency and renewable energy sources is the realization of investment projects focused on environmental protection, improving energy efficiency and promoting renewable energy. Loans are intended for investment in land, buildings, equipment and devices. Final user may be local and territorial (regional) governments, utility companies, companies, dealers, and other legal entities.	2009	Croatian Bank for Reconstruction and Development		IE
MEN-13 Promotion of the use of renewable energy sources and energy efficiency by FZOEU (The Environmental Protection and Energy Efficiency Fund) resources*	Energy, Transport	CO ₂	Increase in renewable energy Switch to less carbon-intensive fuels Efficiency improvements of buildings Efficiency improvement of appliances Efficiency improvement in services/ tertiary sector Efficiency improvement in industrial end-use sectors Demand management/reduction Improved behaviour Low carbon fuels/electric cars	Economic	Implemented	The Environmental Protection and Energy Efficiency Fund provides funding for the preparation, implementation and development of programs and projects in the field of environmental protection, energy efficiency and use of renewable energy sources and climate change mitigation. Funds for financing are provided from the revenues raised by environmental polluters, which includes fees for nitrogen oxides, sulfur dioxide and carbon dioxide emissions, fees for burdening the environment with waste, environmental user fees and special fees for the environment for motor vehicles. Resources of the Environmental Protection and Energy Efficiency Fund are allocated to projects, which improve energy efficiency, including cogeneration, district heating systems, energy audits and demonstration activities, public lighting projects, fuel replacement and waste heat use and projects in the field of building construction and sustainable construction. Renewable energy projects for which the Environmental Protection and Energy Efficiency Fund dividing resources include solar energy, wind energy, biomass, energy from small hydro and geothermal energy. The Environmental Protection and Energy Efficiency Fund provides grants to local and regional governments, companies, craftsmen, non-profit organizations and individuals, through loans, interest rate subsidies, financial aids and donations. For some tenders of the Fund operators in the EU ETS are eligible, thus this measure has effects in the EU ETS and non-EU ETS sector.	2004	Environmental protection and energy efficiency fund		IE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MTR-4: Promotion of production and use of biofuels in transport*	Energy, Transport, Agriculture	CO ₂	Low carbon fuels/electric cars Increase in renewable energy	Economic Regulatory Fiscal	Implemented	The basic regulation that regulates and promotes the usage of biofuel is Law on Biofuels for Transport (OG 65/09, 145/10, 26/11, 144/12). Based on this law, in 2010, the National Action Plan that promotes the production and use of biofuels in transport for the period 2011 - 2020 was prepared. The Plan establishes a policy to promote increased production and use of biofuels in transport in Croatia. The Plan contains a review and assessment of the situation on the fuel market for transport and air protection, comparative analysis, long-term goals, including the target-market of biofuels and measures to promote increased production and use of biofuels in transport. Measures prescribed by action plan include measures that promote the production of raw materials for the production of biofuels, measures that promote the production of biofuels with reference to the fee for promotion of production, measures that promote consumption of biofuels with reference to liquid petroleum distributors to place the biofuels on market, administrative measures and research and development activities. The National Action Plan for Renewable Energy Sources (Ministry of Economy, 2013) determined the goals and policies related to increasing the share of RES in final energy consumption by 2020 and in particular the estimated contribution of energy of biofuels in transport.	2010	Ministry of Economy		IE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MTR-5: Modification of the system for special fee payment for the environment for motor vehicles*	Transport	CO ₂	Low carbon fuels/electric cars Efficiency improvements of vehicles	Fiscal	Implemented	The current system of paying a special fee for the environment in motor vehicles is regulated by Environmental Protection and Energy Efficiency Law (OG 107/03, 144/12), Regulation on unit charges, corrective coefficients and detailed criteria and standards to determine the special environmental fee for motor vehicles (OG 114/14, 147/14) and Ordinance on the manner and terms of calculation and payment of the special fee for environment in motor vehicles (OG 20/04). This measure proposed changes in the method of calculating the fees according to the criteria of pollutant emissions and greenhouse gas emissions to promote the purchase of vehicles with lower emissions. By the Amendments to the Regulation on unit charges, corrective coefficients and detailed criteria and benchmarks for determination of special environmental charges for motor vehicles (OG 114/14, 147/14), this measure was implemented.	2014	Ministry of Environmental and Nature Protection Environmental protection and energy efficiency fund		IE

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

<i>Name of mitigation action^a</i>	<i>Sector(s) affected^b</i>	<i>GHG(s) affected</i>	<i>Objective and/or activity affected</i>	<i>Type of instrument^c</i>	<i>Status of implementation^d</i>	<i>Brief description^e</i>	<i>Start year of implementation</i>	<i>Implementing entity or entities</i>	<i>Estimate of mitigation impact (not cumulative, in kt CO₂ eq)</i>	
MTR-6: Financial incentives for the purchase of hybrid and electric vehicles*	Transport	CO ₂	Low carbon fuels/electric cars	Economic	Implemented	Electric and hybrid vehicles are due to the cost of technological development currently still more expensive than conventional vehicles using internal combustion engines. Electric vehicles are significantly more efficient than conventional from the standpoint of primary energy consumption and are almost neutral from the standpoint of carbon dioxide emissions provided that are powered by electricity generated by using renewable sources. In order to increase the share of electric and hybrid vehicles, subsidies for the purchase of electric and hybrid vehicles through a grant, have been introduced. These payments are made from the income of the Environmental Protection and Energy Efficiency Fund achieved, inter alia, by collecting special environmental charge for motor vehicles. The Third National Action Plan for Energy Efficiency for the Period from 2014 to 2016 (Ministry of Economy, 2014) prescribed goals and a plan to support purchases of electric and hybrid vehicles. In addition, the Law on Excise Tax on Motor Vehicles (OG 15/13, 108/13) introduced a special tax that is calculated on the basis of unit CO ₂ emissions, and is accounted for the purchase of new motor vehicles. Electric and hybrid vehicles are not covered by this law, which has further stimulated the procurement of vehicles with low greenhouse gas emissions.	2014	Ministry of Environmental and Nature Protection Ministry of Economy		IE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MTR-7: Development of infrastructure for electric vehicles in urban areas	Transport	CO ₂	Improved transport infrastructure Low carbon fuels/electric cars	Economic	Planned	The main objective of this measure is development and establishment of infrastructure necessary for popularizing the concept of mobility in urban areas and increase the number of electric vehicles in road traffic. Development of infrastructure should be focused on building the charging stations and stations for changing electric batteries. Because of the battery capacity, the autonomy of movement and time of charging, in urban areas is necessary to provide dense network of filling stations for vehicles in relation to the distribution of filling stations for vehicles with conventional drive. According to experiences in other countries, it was found that for the same services as for conventional vehicles it is necessary to provide one charging station for every four electric vehicles. For implementation of this measure it is necessary to prepare a techno-economic analysis with optimal solution and proposed network of filling/ battery changing stations. Croatia has adopted a National Policy Framework for Alternative Fuels (MMATI, 2015).	2016	Ministry of Economy Ministry of maritime affairs, transport and infrastructure		NE
MTR-8: Development of sustainable transport systems in urban areas	Transport	CO ₂	Modal shift to public transport or non-motorized transport Demand management/reduction	Other (Planning)	Implemented	Traffic and need for mobility is one of the biggest pressures on the environment in urban areas. Increase in the number of passenger cars, the way they are used, intensity of traffic and unstructured expansion of urban areas largely reversed technological progress in relation to the energy efficiency of vehicles and emission intensity, including noise. With this measure, a gradual development of sustainable transport systems in urban areas of Croatia is provided where Plans for sustainable transport development should be drawn up as basic documents. These plans would include the analysis of the current situation, defining the vision and objectives, impact analysis and the adoption of measures for all types of transportation, distribution of responsibilities, method of implementation and monitoring mechanism. These plans would be brought on the level of major cities, they should be prepared in accordance with the European Commission guidelines and funded through EU programs and funds.	2017	Ministry of Environmental and Nature Protection Units of regional and local self-government		NE
MOS-1: Handling with substances that deplete the ozone layer and fluorinated greenhouse gases*	Industry/industrial processes	SF ₆ , PFCs, HFCs	Reduction of emissions of fluorinated gases Replacement of fluorinated gases by other substances	Regulatory	Implemented	Ban of the release of controlled substances and fluorinated greenhouse gases into the atmosphere during collecting, checking leakage, maintenance or servicing of devices and equipment.	2014	Ministry of Environmental and Nature Protection		NE

MOS-2: Technical and organizational measures for collecting, recycling, recovering and destroying of controlled substances and fluorinated greenhouse gases*	Industry/industrial processes	PFCs, SF ₆ , HFCs	Reduction of emissions of fluorinated gases	Regulatory	Implemented	This group of measures defines the way in which used controlled substances and fluorinated greenhouse gases contained in products and equipment must be recovered, recycled, reclaimed or destroyed.	2014	Centers for collecting, recycling and recovering of controlled substances and fluorinated greenhouse gases		NE
MOS-2a: Capacity building and strengthening the knowledge of authorized service technician*	Industry/industrial processes	HFCs, PFCs, SF ₆	Reduction of emissions of fluorinated gases	Other (Education)	Implemented	Education of authorized servicers responsible for collection of controlled substances and fluorinated greenhouse gases during servicing of devices and equipment and provide it to the Centre for the collection, recycling and recovery of controlled substances and fluorinated greenhouse gases.	2014	Ministry of Environmental and Nature Protection		NE
MOS-3: Checking the leakage of controlled substances and fluorinated greenhouse gases*	Industry/industrial processes	HFCs, PFCs, SF ₆	Reduction of emissions of fluorinated gases	Regulatory	Implemented	The operator of the device or equipment is required to take all necessary technically feasible measures to prevent leakage as soon as possible to remove all detected leakage and reduce emissions of controlled substances and fluorinated greenhouse gases in the atmosphere. According to the Regulation on substances that deplete the ozone layer and fluorinated greenhouse gases (OG No. 90/14) checking of leakage is obliged for stationary devices and equipment for refrigeration and air conditioning and heating pumps, as well as the fixed fire protection systems.	2014	Ministry of Environmental and Nature Protection Operators		NE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

MSP-9: Prevention of and reducing the amount of municipal waste*	Waste management/waste	CH ₄	Demand management / reduction	Economic Regulatory Education	Implemented	Prevention of waste generation is the main principle of waste management, as outlined in the Law on Sustainable Waste Management (OG 94/13) and the Waste Management Strategy of the Republic of Croatia (OG 130/05). Waste Management Plan in the Republic of Croatia for the period 2007 – 2015 (OG 85/07, 126/10, 31/11) was adopted to meet the objectives of the Strategy. This measure should be achieved by cleaner production, education, economic instruments, implementation of regulations on integrated pollution prevention and control and investment in modern technologies. According the Act concerning the conditions of accession of the Republic of Croatia to the European union, quantitative targets and deadlines for reducing the total amount of waste deposited to non-compliant landfills are defined. By the end of 2015, the maximum waste disposed of to the non-compliant landfills amounts 1.21 million tons, by the end of 2016 1.01 million tons and by the end 2017 800,000 tons. Disposal of waste to non-compliant landfills in Croatia is prohibited after 31 December 2017.	2005	Units of regional and local self-government		IE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

MSP-10 Increasing the amount of separately collected and recycled municipal waste*	Waste management/waste	CH ₄	Enhanced recycling Reduced landfilling	Other (Regulatory)	Implemented	Except Waste Management Strategy in Croatia, the Waste Framework Directive defines the quantitative targets and deadlines for increasing the amount of separately collected and recycled waste. In accordance with the requirements of the Waste Framework Directive by 2015, it is necessary to ensure separate collection of at least paper, metal, plastic and glass. By 2020, it is necessary to ensure the preparation for re-use and recycling of the following waste materials: paper, metal, plastic and glass from households and possibly from other sources if these waste streams are similar to waste from households, the minimum share of 50% by weight waste. The amounts of separately collected fractions from municipal waste are gradually increasing recently. Collection schemes have been developed for management of six special waste categories - packaging waste, waste oils, end-of-life vehicles, waste electrical and electronic equipment, waste tires, batteries and accumulators. This resulted in increased quantities of collection and recovery of those waste streams.	2005	Units of regional and local self-government		IE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MSP-12: Methane flaring*	Waste management/waste	CH ₄	Enhanced CH ₄ collection and use	Other (Regulatory)	Implemented	The Ordinance on the Methods and Conditions for the Landfill of Waste, Categories and Operational Requirements for Landfills (OG 117/07, 111/11, 17/13, 62/13) and the Ordinance on the Waste Management regulate technical requirements for landfill operation, which reduces possible adverse effects of landfills on the environment. Landfills where landfill gas is generated shall have the system for collection the gas which shall be processed and used. If the collected landfill gas cannot be used for energy generation, it must be flared at the landfill site and the emission of those gases into air has to be prevented. Methane emission into atmosphere is thereby reduced. 4,802 tons of methane is processed at Croatian landfills in 2012, whether it is burned in a flare or used for electricity generation. Collection of data on the quantity of landfill gas captured/flared/recovered is done on the basis of request from Croatian Environment Agency sent by letter to operators of landfills which reported gas capture to Landfill Inventory and Environmental Pollution Register. Methane that is recovered and burned in a flare (without energy recovery) is subtracted from generated methane in the framework of emission estimation.	2005	Units of regional and local self-government		145
MSP-13: Reducing the amount of landfilled biodegradable municipal waste*	Waste management/waste	CH ₄	Reduced landfilling	Regulatory	Implemented	The aim of this measure is to reduce the amount of biodegradable fraction of waste disposed at landfills, thus reducing methane emissions resulting from anaerobic decomposition of waste. Pursuant to the Law on Sustainable Waste Management, quantitative targets related to the reduction of biodegradable municipal waste going to landfills are established. By the end of 2016, the share of biodegradable municipal waste going to landfills must be reduced to 50% weight of biodegradable municipal waste produced in 1997, until the end of 2020 the share of biodegradable municipal waste going to landfills must be reduced to 35% weight of biodegradable municipal waste generated in 1997. Reducing the biodegradable fraction of waste going to the landfills results in reduced emissions of methane, which would otherwise occurred during the process of anaerobic decomposition of waste in landfills.	2016	Units of regional and local self-government		IE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MSP-14: Production of fuel from waste and processing of waste for use in the cement industry*	Energy, Industry/industrial processes, Waste management/waste	CH ₄ , CO ₂	Improved treatment technologies Switch to less carbon-intensive fuels Increase in renewable energy Installation of abatement technologies	Other (Regulatory)	Implemented	The measure is related to the measures in Energy sector means of which the fossil fuels to generate electricity and heat as well as for the cement production in rotary kilns is replaced by the fuel from waste. Production of fuels from waste by mechanical-biological treatment of municipal waste in regional and county waste management centres is planned. Using biodegradable fraction of waste as fuel to generate electricity and heat as well as in the cement industry is important from the standpoint of reducing greenhouse gas emissions, conservation primary energy sources and reducing the amount of waste going to landfills. Biodegradable fraction of waste is considered to be neutral with respect to carbon dioxide. Reduction of methane emissions will be achieved by reducing the amount of landfilled biodegradable waste.	2009	Units of regional and local self-government		NE
MSP-15: Use of biogas for electricity and heat generation*	Waste management/waste, Energy	CH ₄ , CO ₂	Increase in renewable energy Switch to less carbon-intensive fuels Enhanced CH ₄ collection and use Waste incineration with energy use	Other (Regulatory)	Implemented	The measure is associated with measure MEN-9 Usage of biodegradable fraction of waste in public electricity and heating plants. The main mechanism for promoting implementation of biogas cogeneration plants are incentive prices (tariffs) that depend on the installed electric power of the plant. Looking at the waste management sector, the potential reduction in greenhouse gas emissions of these measures is the potential to reduce methane emissions (resulting from the anaerobic decomposition of the biodegradable fraction of waste), which is used to generate electricity and heat.	2012	Units of regional and local self-government		IE
MSP-16: Thermal treatment of municipal waste and sludge from wastewater treatment plants	Energy, Waste management/waste	CH ₄ , CO ₂	Increase in renewable energy Switch to less carbon-intensive fuels Enhanced CH ₄ collection and use Waste incineration with energy use	Economic	Planned	Construction of a facility for thermal processing of municipal waste in the city of Zagreb is planned in which around 300,000 tonnes of municipal waste and around 70,000 tonnes of dried sludge from the "Central waste water treatment plant" would be processed annually at the facility by 2020. Thermal treatment of municipal waste and sludge from wastewater treatment plant is important from the standpoint of conservation primary energy sources, reducing the amount of waste going to landfills and reducing greenhouse gas emissions.	2020	City of Zagreb		34

MSP-4: Development of the assessment of implementation of GHG emission reduction measures in the agriculture sector	Agriculture	CH ₄ , N ₂ O	Reduction of fertilizer/manure use on cropland Other activities improving cropland management Improved livestock management Improved animal waste management systems Activities improving grazing land or grassland management Improved management of organic soils	Research	Planned	Development of this assessment is recommended with the goal of valorization of middle-term period acceptability of potential emission reduction measures that imply various social and economical risks for farmers. Possible measures to be analyzed are: - change of cattle feeding regime and improvement of cattle feed with the goal of reducing methane emission from manure management and enteric fermentation - anaerobic decomposition and biogas manufacturing - improvement of nitrogen use efficiency with the goal of reducing N ₂ O emissions from synthetic and organic fertilizer use - carbon capture in agricultural soil.	2016	Ministry of agriculture Ministry of Environmental and Nature Protection		NE

MSP-4a: Rural Development Programme of the Republic of Croatia for the Period 2014-2020*	Agriculture, Forestry/LULUC F	CH ₄ , CO ₂	Other activities improving cropland management Improved livestock management Reduction of fertilizer/manure use on cropland Improved animal waste management systems Activities improving grazing land or grassland management Improved management of organic soils	Other (Economic)	Adopted	One of the principal areas of institutional work of the European Union is the Common Agricultural Policy (CAP). Rural development, as a second CAP tier, is financed through the Agricultural Fund for Rural Development (EAFRD). Development of the Rural Development Programme of the Republic of Croatia is a prerequisite for the EAFRD eligibility in the next period. Goals set by the Europe 2020 Strategy are also evident withing three CAP goals: agriculture competitiveness, sustainable resource management and balanced development of rural areas. Rural Development Programme should achieve the goals set by CAP through measures given in six priorities: - Promotion of knowledge and innovation transfers in agriculture, forestry and rural areas - Improvements in sustainability and competitiveness in agriculture, forestry and rural areas - Promotion of food provision chain, including processing and market placement of agricultural products, animal welfare and risk management - Revitalization, protection and improvement of agriculture and forestry related ecosystems - Promotion of resource efficiency and encouraging of the shift to low-carbon farming, resilient to climate changes in the agriculture, food and forestry sectors - Promotion of social involvement, combating poverty through economical development of rural areas.	2015	Ministry of agriculture		68

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MSP-5: Improving the reporting from LULUCF sector*	Forestry/LULUCF	CO ₂	Conservation of carbon in existing forests Afforestation and reforestation Enhancing production in existing forests Enhanced forest management Increasing the harvested wood products pool Prevention of deforestation Strengthening protection against natural disturbances Substitution of GHG-intensive feedstocks and materials with harvested wood products Prevention of drainage or rewetting of wetlands Restoration of degraded lands	Regulatory	Implemented	Annex I countries United Nations Framework Convention on Climate Change, including the Croatian, are obligated in accordance with Annex I to Decision 15/CP.17 continuously review the quality of the relevant technical elements of GHG inventory. Because of this commitment, and because of the fact that additional improvements to the procedure for determining the changes in carbon stocks in LULUCF sector need to be done for each store separately, as well as the procedure for more detailed matrix of land, the implementation of these measures is still considered necessary. For the implementation of this measure, during 2014, the Ministry of Environmental and Nature Protection launched two projects from the LULUCF sector that are currently in the final stages of implementation. These are: 'Improving the reporting in the sector Land use, land-use change and forestry during the first commitment period of the Kyoto Protocol' (abbreviated as LULUCF 1) and 'Upgrade of the National System for reporting on greenhouse gas emissions for the implementation of the Decision of the European Parliament and of the Council No. 529/2013 of 21 May 2013 on accounting rules on greenhouse gas emissions and removals resulting from activities relating to land use, land-use change and forestry and on information concerning actions relating to those activities' (abbreviated as LULUCF 2). Since the land matrix represents the basis for the calculation of sinks/emissions of greenhouse gases in the LULUCF sector, the LULUCF 2 project includes defining the national system for determining the cover, use and conversion of all land categories, as well as the development of the new project proposal that would put the newly defined system into operation.	2014	Ministry of Environmental and Nature Protection Ministry of agriculture		NE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

MSP-6: Preparation of cost-benefit analysis of afforestation on new areas and natural regeneration of forests as a measure of increasing sinks in LULUCF sector	Forestry/LULUCF	CO ₂	Afforestation and reforestation Conservation of carbon in existing forests Enhancing production in existing forests Enhanced forest management Prevention of deforestation Increasing the harvested wood products pool Strengthening protection against natural disturbances Substitution of GHG-intensive feedstocks and materials with harvested wood products Prevention of drainage or rewetting of wetlands Restoration of degraded lands	Research	Planned	Changes in the sinks of greenhouse gases as a result of direct land use change caused by human activity and forestry activities are allowed to calculate in the national balance of emissions and sinks of greenhouse gases and used to fulfill obligations under the Kyoto Protocol. By analyzing the costs and benefits of afforestation on the new areas possibility of increasing greenhouse gas sinks using reforestation activities on the barren productive forest floor will be investigated. Thus would justify introduction of possible incentive measures, such as the afforestation of fast-growing species and natural regeneration of forests, equivalent to measures for greenhouse gas emissions reduction. The implementation of this activity was determined in the Plan for Air Protection, Ozone Layer Protection and Climate Change Mitigation for the period 2013-2017 (OG 139/13), and its implementation is planned for 2015.	2016	Ministry of Environmental and Nature Protection Ministry of agriculture		NE

MSP-7: Revision of Forest Management Reference Level (FMRL) under Article 3.4 of the Kyoto Protocol for the second commitment period	Forestry/LULUCF	CO ₂	Afforestation and reforestation Conservation of carbon in existing forests Enhancing production in existing forests Increasing the harvested wood products pool Enhanced forest management Prevention of deforestation Strengthening protection against natural disturbances Substitution of GHG-intensive feedstocks and materials with harvested wood products Prevention of drainage or rewetting of wetlands Restoration of degraded lands	Regulatory	Implemented	For the second commitment period of the Kyoto Protocol new rules for the calculation of sinks generated from forest management under which the outflow is calculated relative to the Forest Management Reference Level (FMRL) were adopted. In addition, obligation of revision of reference levels for forest management activities in accordance with the correction in the national inventory is introduced and it is necessary to determine the new value of the reference level for Croatia. For the purpose of implementing this measure, as part of the launched project LULUCF 1, a review of the established value for FMRL is planned and the first technical correction of FMRL for the Republic of Croatia will be performed and later presented in NIR 2015. According to currently available information, by the end of the Second commitment period it will be necessary to perform another technical correction of FMRL considering that further improvements of the LULUCF sector calculation are planned for this period.	2014	Ministry of Environmental and Nature Protection Ministry of agriculture		NE

MSP-8: Development of Action plan for LULUCF sector*	Forestry/LULUCF	CO ₂	Afforestation and reforestation Conservation of carbon in existing forests Enhancing production in existing forests Increasing the harvested wood products pool Prevention of deforestation Enhanced forest management Substitution of GHG-intensive feedstocks and materials with harvested wood products Strengthening protection against natural disturbances Prevention of drainage or rewetting of wetlands Restoration of degraded lands	Regulatory	Implemented	According to the Decision 529/2013/EU , as a member of the European Union, Croatia is obliged to prepare and submit information from the forestry sector to the Commission in accordance with Article 10 of Decision 529/2013/EU. The plan was drafted and submitted to the EC on January 9th 2015, and will form an integral part of the national strategy for low carbon development. As part of the action plan defined are measures for maintaining/reducing emissions and maintaining/increasing sinks of greenhouse gases that occur as a result of implementation of activities of forest management, cropland management, grazing land management, and implementation of afforestation and deforestation. The basis for the preparation of the aforementioned document was the draft of Rural Development Programme of the Republic of Croatia for the period 2014-2020 (the document is in the process of harmonization with the European Commission) to define the measures in the forestry sector as well as to define the measures associated with agricultural land use categories. During the document preparation, used were data and information available in the National Inventory Report on Greenhouse Gas Emissions for the Republic of Croatia (NIR 2014), as well as the data and information available in a number of different strategic documents, national regulations (e.g. Ordinance on cross-compliance OG 27/14) and the European Commission Guidance , which was created in order to assist Member States in fulfilling the obligations defined under Article 10 of the Decision 529/2013/EU. In order to address future activities within the low-carbon development strategy it should be noted that the Air Protection Act (OG 130/11, 47/14) stipulates the obligation of adopting the Low-Carbon Development Strategy of the Republic of Croatia, which ensures a long-term economic and social development towards a low-GHG emission society. Low-Carbon Development Strategy defines the guidelines for long term actions by defining objectives in accordance with article 4, paragraph 1 of the	2014	Ministry of Environmental and Nature Protection Ministry of agriculture		NE

Table 3

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

MSP-18: CO2 emission tax*	Energy, Cross-cutting, Industry/industrial processes	CO ₂	Framework policy Efficiency improvement in industrial end-use sectors Installation of abatement technologies	Fiscal	Implemented	The Regulation on Unit Charges, Corrective Coefficients and Detailed Criteria and Benchmarks for Determination of the Charge for Emissions into Environment of Carbon Dioxide (OG 73/07, 48/09) stipulates the obligation to pay charges on CO ₂ emission for all stationary sources emitting more than 30 tonnes of CO ₂ per year. Fee payers who invest in energy efficiency, renewable energy and other measures to reduce emissions of CO ₂ and other greenhouse gas emissions are charged by lower fee. The Environmental Protection and Energy Efficiency Fund is authorized for accounting and collecting charges. The Law on Amendments to the Law on Environmental Protection and Energy Efficiency Fund (OG 142/12) stipulates that from 1 January 2013 legal or natural persons who own or use a single source of CO ₂ emissions, for which permits for greenhouse gas emissions have been obtained, do not have to pay fee. This means that from 2013 onwards measures apply only to sources that are not covered by the ETS. The amount of compensation paid by the operators of installations excluded from the EU ETS is defined by the Decision on the amount of the unit charge on greenhouse gas emissions for operators of installations excluded from emissions trading system for 2013 (OG 105/14).	2013	Ministry of Environmental and Nature Protection Environmental protection and energy efficiency fund		NE
MSP-19: Establishment of the Committee for cross-sectoral coordination of policies and measures for mitigation and adaptation to climate change*	Cross-cutting	CH ₄ , CO ₂ , HFCs, N ₂ O, PFCs, SF ₆	Multi-sectoral policy	Regulatory	Implemented	In accordance with the Air Protection Act (OG 130/11, 47/14), for monitoring and evaluation of the implementation and planning of policies and measures for mitigation and adaptation to climate change in the Republic of Croatia, the Commission for inter-sectoral coordination of policies and measures for mitigation and adaptation to climate change (OG 114/14) was established. The committee members include representatives of relevant government bodies and other relevant organizations, agencies and non-governmental organizations. The Committee members, activities and functioning of the Commission is determined by the Croatian Government on the proposal of the ministry responsible for environmental protection.	2014	Ministry of Environmental and Nature Protection, competent ministries		NE

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ^a	Sector(s) affected ^b	GHG(s) affected	Objective and/or activity affected	Type of instrument ^c	Status of implementation ^d	Brief description ^e	Start year of implementation	Implementing entity or entities	Estimate of mitigation impact (not cumulative, in kt CO ₂ eq)	
MSP-17: Establishment of monitoring, reporting and verification of greenhouse gas emissions in the lifetime of liquid fuels*	Cross-cutting, Transport	CO ₂	Efficiency improvements of vehicles Framework policy	Regulatory	Implemented	In accordance with the Air Protection Act (OG 130/11, 47/14), supplier that places the fuel on domestic market shall monitor greenhouse gas emissions per energy unit in the life of the fuel. Suppliers have to draw up a report that has to be verified and submitted to the Environmental Protection Agency. Regulation on the quality of liquid petroleum fuels (OG 113/13, 76/14) defines limit values for components and quality characteristics of liquid petroleum fuels, the method of determining and monitoring the quality of liquid petroleum fuels, method of conformity, the conditions for the operation of laboratories for sampling and laboratory analysis of quality liquid petroleum fuels, product labeling and the method and deadline for preparation and submission of reports on the quality of liquid petroleum fuels to the Environmental Protection Agency.	2012	Ministry of Environmental and Nature Protection Ministry of economy Croatian Environment Agency		NE
MSP-20: Intensifying the use of innovative information and communication technologies (ICT) to reduce greenhouse gas emissions*	Cross-cutting	CH ₄ , CO ₂ , HFCs, N ₂ O, PFCs, SF ₆	Framework policy	Information	Adopted	Innovative information and communication technologies have an increasingly important role in reducing greenhouse gas emissions and increasing energy efficiency. Intensifying their use in public administration, services and manufacturing processes, will boost productivity and work efficiency and at the same time will reduce energy consumption and consequent greenhouse gas emissions. The measure is expected to intensify the use of innovative ICT and monitoring of actual energy savings and reductions of greenhouse gas emissions. Among others, examples of the implementation of this measure are: - System for the Measurement and Verification of Energy Savings (SMIV, 2014), which will monitor the energy savings and resultant reduction of greenhouse gas emissions, was presented by the Ministry of Economy, - Information System for Energy Management (ISGE), which is supported and established by the UNDP, GEF, the Fund and the Croatian Government is used for public buildings and is administered by the Agency for Transactions and Mediation in Immovable Properties (APN).	2011	Ministry of Environmental and Nature Protection Croatian Environment Agency		NE

Reporting on progress^{a, b}

Year ^c	Total emissions excluding LULUCF	Contribution from LULUCF ^d	Quantity of units from market based mechanisms under the Convention		Quantity of units from other market based mechanisms	
	(kt CO ₂ eq)	(kt CO ₂ eq)	(number of units)	(kt CO ₂ eq)	(number of units)	(kt CO ₂ eq)
(1990)	35,115.98					
2010	28,326.05					
2011	27,719.29					
2012	25,505.09					
2013	24,492.78					
2014						

Abbreviation : GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b For the base year, information reported on the emission reduction target shall include the following: (a) total GHG emissions, excluding emissions and removals from the LULUCF sector; (b) emissions and/or removals from the LULUCF sector based on the accounting approach applied taking into consideration any relevant decisions of the Conference of the Parties and the activities and/or land that will be accounted for; (c) total GHG emissions, including emissions and removals from the LULUCF sector. For each reported year, information reported on progress made towards the emission reduction targets shall include, in addition to the information noted in paragraphs 9(a--c) of the UNFCCC biennial reporting guidelines for developed country Parties, information on the use of units from market-based mechanisms.

^c Parties may add additional rows for years other than those specified below.

^d Information in this column should be consistent with the information reported in table 4(a)I or 4(a)II, as appropriate. The Parties for which all relevant information on the LULUCF contribution is reported in table 1 of this common tabular format can refer to table 1.

Abbreviation: USD = United States dollars.

^a Parties should fill in a separate table for each year, namely 2011 and 2012, where 2014 is the reporting year.

^b Parties should provide an explanation on methodology used for currency exchange for the information provided in table 7, 7(a) and 7(b) in the box below.

^c This refers to support to multilateral institutions that Parties cannot specify as climate-specific.

^d Parties should explain in their biennial reports how they define funds as being climate-specific.

^e This refers to funding for activities which are cross-cutting across mitigation and adaptation.

^f Please specify.

^g Multilateral climate change funds listed in paragraph 17(a) of the "UNFCCC biennial reporting guidelines for developed country Parties" in decision 2/CP.17.

^h Other multilateral climate change funds as referred in paragraph 17(b) of the "UNFCCC biennial reporting guidelines for developed country Parties" in decision 2/CP.17.

Custom Footnotes

Each Party shall provide an indication of what new and additional financial resources they have provided, and clarify how they have determined that such resources are new and additional. Please provide this information in relation to table 7(a) and table 7(b).
